

Archer 500

Flexible, rapid solution for crowd control, traffic flow and vehicle incursions

The Archer 500 barrier provides “drop and go” security for a wide range of risk management scenarios. Manufactured of high strength, ballistic rated steel, the Archer 500 can be added to entrance areas, checkpoints, loading docks or sites that require additional security at a moment’s notice. Compared to the Archer 750, the Archer 500 is lighter and shorter in length, yet offers exceptional vehicle stopping capabilities.

Deployment formations for the Archer 500 barrier include:

- Single “drop and go” clusters
- Staggered groupings
- Serpentine layouts
- Interconnected sets of 2 - 4 units

Unlike metal “bike rack” barricades, fence panels and fixed barriers, the Archer 500 delivers anti-vehicle and ballistic protection that is flexible enough to meet any crowd control or traffic flow requirement. All Archer barriers feature detachable wheels to prevent unauthorized removal.

Archer Barriers provide a new option for security and protect an organization’s investment in its people, facilities and assets.

Archer 500™ patent pending

The Archer Barrier Systems include the following features:

- Rapidly deployable
- Fabricated of high strength steel
- Ballistic rated for armor piercing NATO rounds up to .50 cal. ball rounds
- Two person portable
- Non-electronic, non-hydraulic design reduces training and maintenance costs
- Modular design enables flexible configuration

Measurements

2' wide, 3.25' deep, 30" high
